Epidemiology Update: It's Always Something

If your medical staff needs an update on the latest epidemiology issues that may affect their practice, consider contacting our office to book a speaker on this topic at 877-505-4777 or info@speakersnetwork.com.

What is the problem?

With constantly changing information about COVID-19 and Monkeypox and other infectious disease issues that may arise, physicians must understand the most up-to-date information on these infections, their epidemiology, and possible prevention and treatment options. Additionally, with the emergence of poliovirus in NY, we must discuss this previously eliminated disease. ACIP recently approved updated boosters for COVID-19, so healthcare professionals need to know the current recommendations for various groups.

Learning Objectives

1. Describe current epidemiologic characteristics of the COVID-19 pandemic, including transmissibility and severity of illness.
2. Detail effectiveness of available vaccines in protecting against the Omicron variant.
3. Describe the epidemiologic characteristics of the Monkeypox outbreak.
4. Explain the current polio situation in New York

How do we know this is a problem?
