Leadership in Crisis

If your medical staff needs an update on leadership skills during a crisis, consider contacting our office to book a speaker on this topic at 877-505-4777or info@speakersnetwork.com.

What is the problem?

Although healthcare professionals are expected to demonstrate leadership skills in normal times, leadership during a crisis requires an altogether different skill set. Healthcare professionals have recently experienced a catastrophic crisis during the COVID-19 pandemic, where leadership decisions made a critical difference in many of our institutions. However, the strategies and mindset required in a crisis are not taught in medical school, and most healthcare professionals are unaware of the resources available to develop these competencies. It is essential to disseminate and share leadership principles and knowledge to maximize the chances of a successful emergence out of a crisis for healthcare professionals in the future.

Learning Objectives

1. Describe the mechanics of a crisis and how to recognize key areas of need in a crisis
2. Identify principles and strategies to lead in a crisis
3. Effectively manage teams and entities as a leader in crisis mode

How do we know this is a problem?

Kaul V et al. Leadership in Crisis: Lessons and Applications from the COVID 19 crisis
Gastroenterology. 2020 Sep; 159(3): 809–812.
